IELTS Up Words!

Lesson 33: Renewable Energy

Hello. You are listening to the thirty-third lesson of IELTS Up Words! In this lesson, we will talk about renewable energy. You may think it is enough to do things like reducing our carbon footprint or food miles, but we have caused so much damage on this planet that doing these few things won't suffice. By the way, your carbon footprint shows how much CO2 is emitted from your personal energy use, like driving, eating out, or traveling.

Now, I am going to read this piece for you, which is a comparison between renewable energy and fossil fuels. Listen carefully and try to understand it all.

"One other thing that we can do is to use renewable energy as fuel. Renewable energy, generally speaking, is clean energy and non-polluting. Many forms do not emit any greenhouse gases or toxic waste in the process of producing electricity. It is a sustainable energy source that is reliable for the long-term. Renewable energy is cost-effective and efficient.

Green energy comes from natural sources such as sunlight, wind, rain, tides, plants, algae, and geothermal heat. These energy resources are renewable, meaning they are naturally replenished. In contrast, fossil fuels are finite resources that take millions of years to develop and will continue to diminish with use.

Renewable energy sources also have a much smaller impact on the environment than fossil fuels, which produce pollutants, such as greenhouse gases, and as a by-product, contribute to climate change. Gaining access to fossil fuels typically requires either mining or drilling deep into the earth, often in ecologically sensitive locations.

Green energy, however, utilizes energy sources that are readily available all over the world, including in rural and remote areas that don't otherwise have access to electricity. Advances in renewable energy technologies have lowered the cost of solar panels, wind turbines and other sources of green energy, placing the ability to produce electricity in the hands of the people rather than those of oil, gas, coal, and utility companies."

This piece that you listened to was taken from Mother Nature Network. Do you see how beautifully it was written? Another way to get ideas for a topic that you want to talk about is to google it. Yes, for example, if you want to learn about energy consumption, google it and take a look at the articles that you find. If you find them interesting, save them and read them thoroughly to learn more.

Speaking Tip

Describe That Word

Sometimes, when you speak, your mind suddenly goes blank, or you forget a word, such as a proper noun, location, or topic-related word on the speaking test. If and when this happens, keep your cool and try to describe that word. This will not only help maintain the flow of your talk but could also impress the examiner because you are demonstrating your ability to use vocabulary flexibly.

For example, if the word "crane" slipped your mind while talking, you could instead describe it like this:

"I work for a company that imports heavy machinery, like the one used for moving massive objects around."

topic-related words and structures	meaning	translation	other structures
renewable energy	the energy collected from renewable resources, which are naturally replenished, such as sunlight and wind	انرژی تجدیدپذیر	solar energy (also solar power); wind energy (also wind power)
reducing our carbon footprint	decreasing the total greenhouse gas emissions associated with all the activities of a person	کاهش تأثیرات کربن (میزان دی‌اکسید کربن تولیدی) ما	
food miles	a mile over which a food item is transported during the journey from producer to consumer	مسافت حمل مواد غذایی از تولید کننده به مشتری	
fuel	material such as coal, gas, or oil that is burned to produce heat or power	سوخت	combustible (=able to catch fire and burn easily)
non-polluting	not releasing pollutants, especially carbon dioxide, into the atmosphere	غیرآلاینده	eco friendly; environmentally friendly
toxic waste	unwanted chemicals that are poisonous to living things	زبالهٔ سمی	industrial waste; hazardous waste (= dangerous)
a sustainable energy source	energy sources that are not expected to be depleted in a time frame relevant to the human race	یک منبع انرژی پایدار/بی پایان	replenished (= filled up again)
cost-effective	producing good results without costing a lot of money	مقرون‌به‌صرفه	opposite: cost-intensive; inefficient
efficient	achieving maximum productivity with minimum wasted effort or expense	بهینه؛ پربازده؛ کارآمد	cost-effective; productive opposite: inefficient

topic-related words and structures	meaning	translation	other structures
tides	the rise and fall of sea levels caused by the pull of the Sun and the Moon on the Earth	جزر و مد	similar: wave; flow; tidal (adjective)
algae	very simple, usually small plants that grow in or near water and do not have ordinary leaves or roots	جلبک	seaweed; vegetation
geothermal heat	connected with the heat inside the earth	گرمای زمین‌گرمایی	geology
they are naturally replenished	they are refilled or restored by nature	به‌طورطبیعی دوباره پر/ تازه می‌شوند	Recharge opposite: empty; deplete
finite resources	natural resources, such as fossil fuels, that cannot be readily replaced by natural means	منابع محدود/ تمام‌شدنی	opposite: infinite synonym: non-renewable resources
to diminish	to reduce or be reduced in size or importance	کم شدن	to diminish someone's achievements
a by-product of	something that is produced as a result of making something else, or something unexpected that happens as a result of something	فرآوردهٔ جانبی	a consequence/side effect
green energy	renewable energy; clean energy	انرژی پاک؛ انرژی تجدیدپذیر	
utilize energy sources	make practical and effective use of energy sources	به‌کارگرفتن منابع انرژی	using up; consume
remote areas	areas far away in distance	مناطق دورافتاده	isolated; secluded
they don't otherwise have access to electricity	otherwise = differently, or in another way	درغیراین‌صورت به برق دسترسی ندارند	

topic-related words and structures	meaning	translation	other structures
solar panels	flat constructions resembling a window, built with technology that allows them to harvest the heat of the Sun and convert light directly into electricity	پنل‌های خورشیدی	solar collector; solar cell
wind turbines	turbines having a large vaned wheel rotated by the wind to generate electricity	توربین‌های بادی	windmill; wind energy converter
energy consumption	energy usage	مصرف انرژی	energy utilization; power consumption

other words/ structures	meaning	translation	other structures
it will suffice	it will be enough	کفایت می‌کند؛ کافی خواهد بود	it will do; it will be sufficient
utility companies	a company which supplies utilities, such as gas, electricity, etc.	شرکت‌های ارائه‌دهندهٔ خدمات شهری، مانند گاز، برق، و غیره	public utility company (usually just “utility”)
read them thoroughly	reading something thoroughly means reading it with attention to all its aspects or details	به‌طورکامل آن‌ها را بخوانید	comprehensively; fully
your mind suddenly goes blank	you are unable to remember a particular thing, or you cannot remember anything	همه‌چیز را فراموش‌کردن؛ (ناگهان) چیزی به ذهن آدم نرسیدن	synonym: my mind just froze; I was lost for words; I was at a loss
keep your cool	maintain a calm and controlled attitude	آرامش خود را حفظ کن	keep cool; remain calm opposite: lose your calm
crane	a large machine with a long, movable part for lifting and moving heavy objects	جرثقیل	
slip your mind	If something slips your mind, you forget it	فراموش‌کردن	slip your memory
import	bring (goods or services) into a country from abroad for sale	واردکردن؛ واردات	opposite: export
heavy machinery	large pieces of machinery or equipment, especially those used in the building industry	ماشین‌آلات/تجهیزات سنگین	heavy equipment
