IELTS Up Words!

Lesson 51: Career Advice

Welcome back to lesson fifty-one of IELTS Up Words! From the title of this lesson, you might have made some assumptions on what this lesson is going to be about. Am I right?

Yes, in this lesson, I will give you some career advice and build on the vocabulary we learned back in lessons thirty-four and thirty-five, which were about employment and careers.

Ready for some advice? Let's dive in.

Advice #1: Get a proper education. This doesn't mean that you should go and study for a degree. No, these days, there is no need to graduate from college to get a job with good career prospects. There is more emphasis on your practical skills, so hone your skills by taking technical courses.

Advice #2: Master the art of versatility. Having knowledge and skillsets in a variety of areas can help you maintain your competitive edge. Learn different trades by attending seminars and taking courses. Some courses lead to an apprenticeship where you can learn as you work, and don't forget about on-the-job-training sessions because they can keep your job skills up to date.

Advice #3: Do not set unattainable goals for yourself. It is okay to be ambitious and strive to achieve more, but you also need to be realistic with regards to your capabilities. If you expect too much of yourself, you will burn out soon.

Advice #4: Be patient and work hard. With patience and hard work, you are sure to move up the ladder at work and soon get promoted, or even land a lucrative job.

Advice #5: Keep a balance. Some people find it hard to juggle work and family responsibilities. They often complain about their grueling workload and how hard it is to dedicate proper time to family. Find a way to keep this balance because life is more than big paychecks.

Advice #6: Build rapport in your workplace. Be someone who brings out the best in other people and wins the respect of colleagues. Building good relationships at work creates a more friendly environment to work in.

Speaking Tip

Clarification

- One of the best ways to develop your answers is to clarify them.
- Clarification of a response is the process of introducing a statement that repeats what has been said in a different and usually simpler or more exact way.

You can use the below language to clarify your response:

- in other words

Example: A future where humans don't age seems far-fetched. In other words, it is highly unlikely that we will ever be able to find a cure for aging.

- to put it another way

Example: Creativity is an important characteristic of a good writer. To put it another way, you cannot write fascinating stories without being at least a little creative.

• this means that/which means that

Example: I think the future of the gig economy is really bright, which means that there will be more work for freelancers.
